Welcome to Green City

In Green City you are the mayor of your own city. In this city builder you have to take important decisions to balance economic growth and environmental sustainability.

Improve your city by building new infrastructures or improving the old ones. You will manage your energy, economies, carbon levels and the satisfaction of the population.

Managing the city is an exciting challenge, and we're here to help you to get started.

Set Up and Getting Started

Set Up

First of all, before playing the game you have to install it, to do that go to the GitHub Repository of the game:

<https://github.com/algosup/2024-2025-project-2-serious-game-team-3/releases>

Depending on your Operating System download the corresponding file:

Operating System	File to Download
Windows	Green_City.exe
MacOS	Green_City.dmg

Double Click on the downloaded file to launch the game

Getting Started

When you first enter the game you will arrive on this menu:

When you click on the New Game button, you will arrive in a pre-existing city that you will have to improve. Good Luck.

Improve the City

When you start the game, you arrive in a city halfway between industry and ecology.

It is your decisions that will influence the direction this city will take.

Your decision will come in the form of ameliorations that you will give to the different buildings of your city.

Those decisions will impact the generation of money and CO2 of your city.

Buildings

Your City is composed of buildings that produce money and CO2 passively.

There are have different types of buildings:

- Coal factories
- Garages
- Shops
- Townhouse
- Skyscrapers
- Apartment buildings

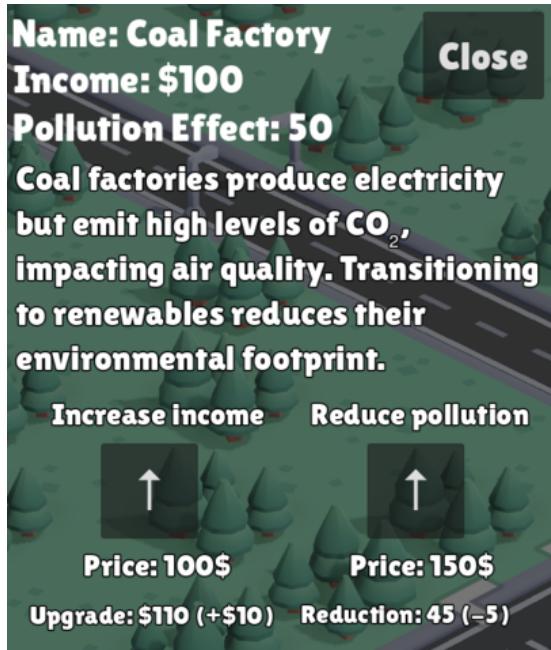

Each type of building produces money and CO2 in different quantities, that are influenced by which amelioration you gave to each building.

Ameliorations

Ameliorations are building specific, they cost money to buy and affect the statistics of your buildings

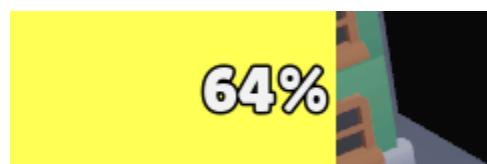

Amelioration come in two "flavors":

- Increasing the income,
- Reducing the production of CO₂.

The CO₂ Gauge

On the top left corner of the screen you will find a gauge indicating the current concentration of CO₂ in the atmosphere. Your goal is to keep that gauge as empty as possible; if it reaches 100% you lose the game.

Get Help

Update the Game

You can check for any update on the GitHub repository of the game in the release section. If there is any, see the [Set Up](#)

Get information about your Game

To get more information about your game follow the steps below:

1. Go to the bottom of the Settings page, you will find an item called *Legal Information*.
2. Click on it, a pop up will appear with:
 - Name of the game
 - Version of the Game
 - Name of the Engine
 - Version of the Engine
 - Licence
 - Legal Information
